Cells in this table have been randomly adjusted to avoid the release of confidential data

* The living arrangements variable is different to marital status. It combines information from both marital status and the relationship matrix

Therefore a person living as part of a 'cohabiting couple' could in fact be married (to someone else).

** A person not living in a couple can be classified married (or re-married) if they denote their marital status as married (or re-married) but have no spouse or partner resident in the household

~ People aged 16 and over living in households

% = Percentages
